

INTRODUCTION TO C

C is a

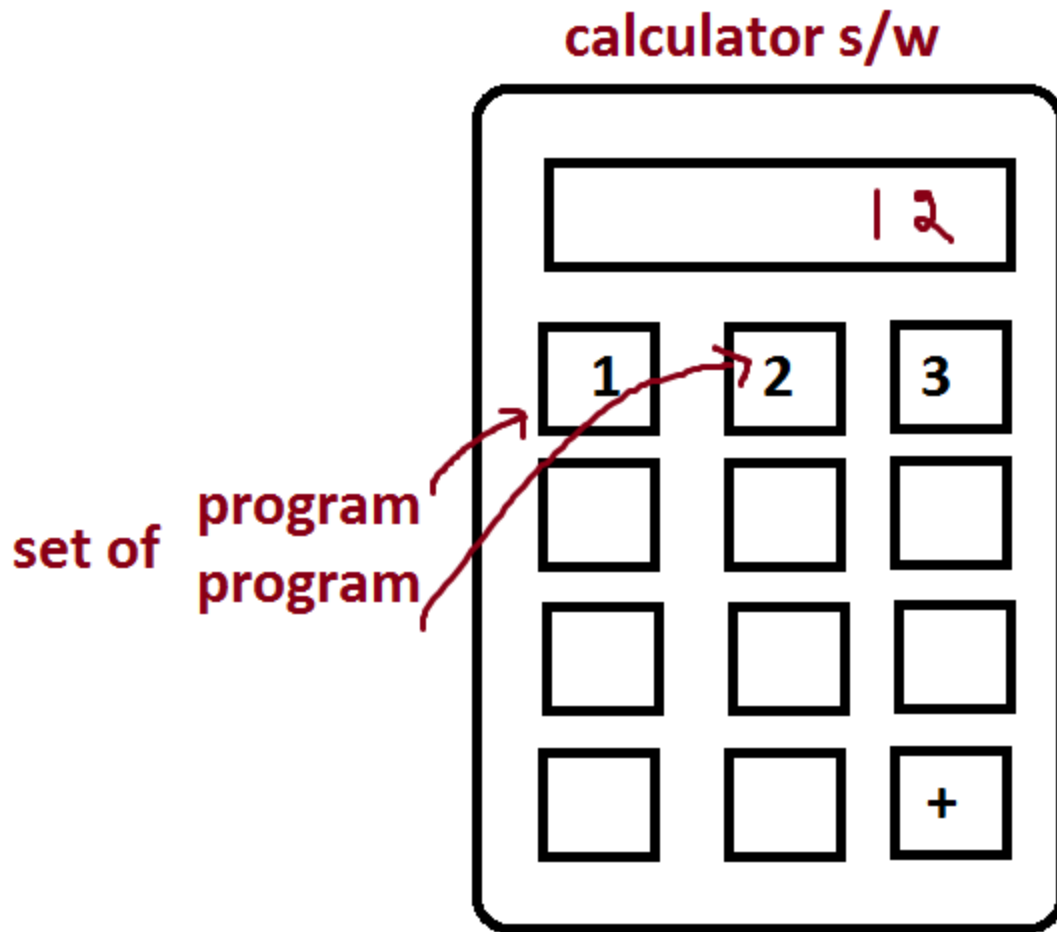

1.It is a high level / middle level programming language.

What is program?

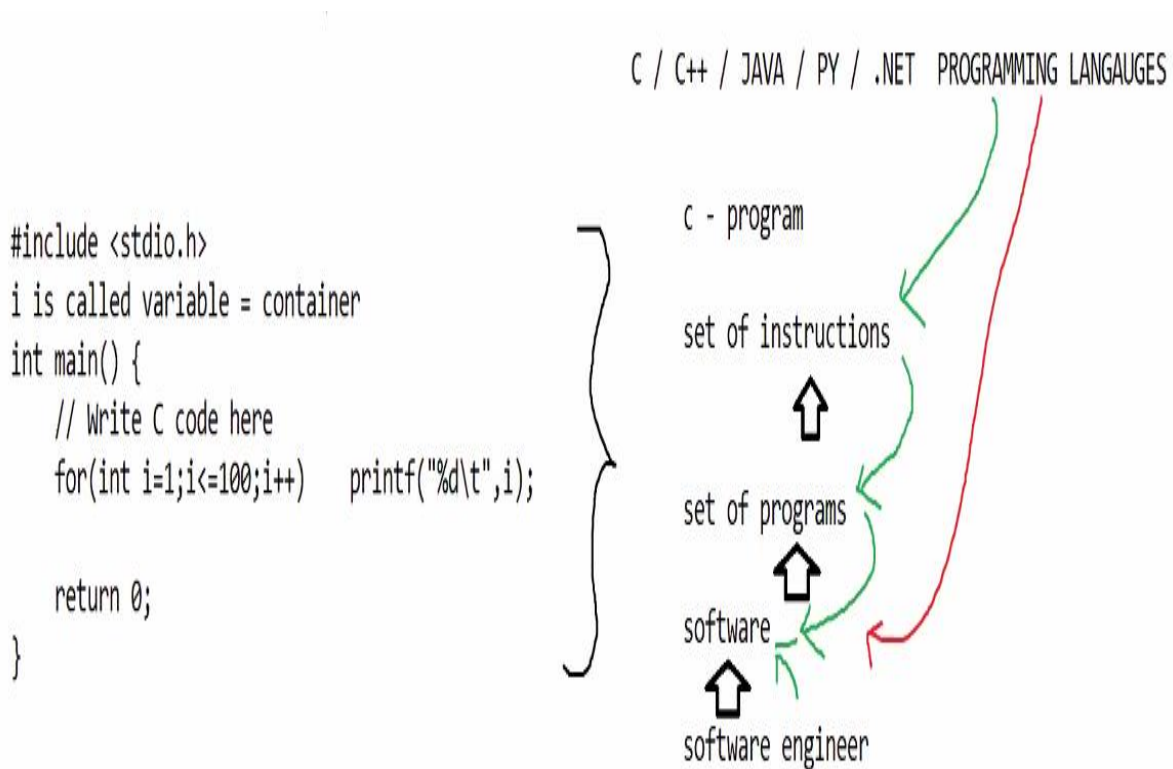

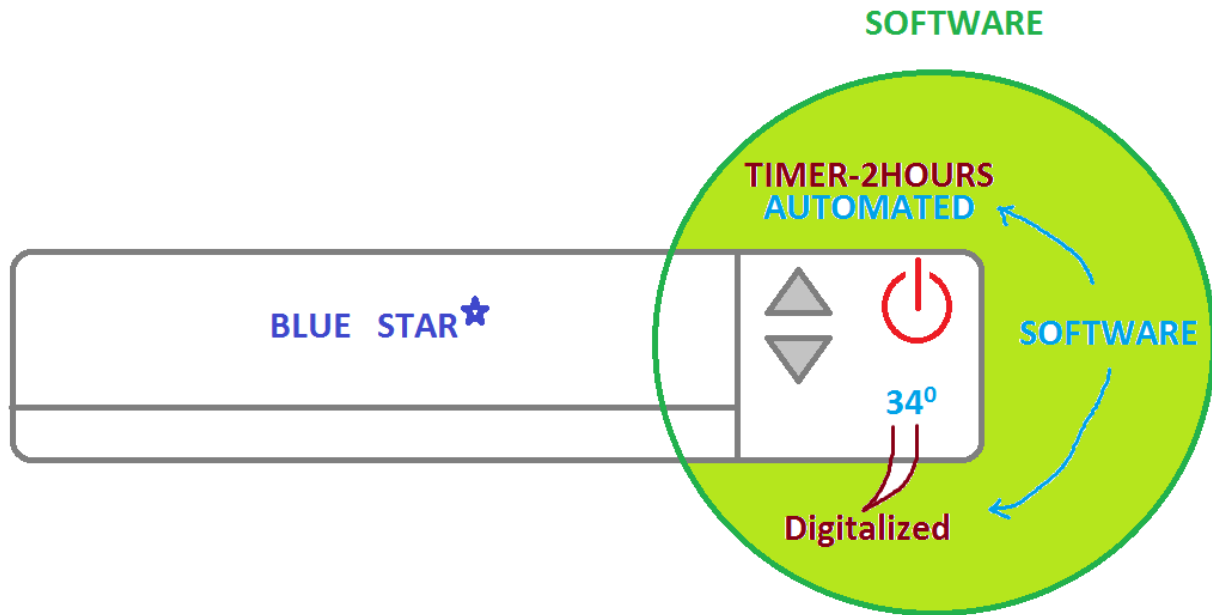

Set of instructions is called program.

What is software?

Set of programs is called software.

As per IT industry software is a digitalized and automated process.

We are having 2 type of software.

1.System software

Eg: operating system, device drivers, translators,..

2.Application software

Eg: whatsapp, instagram, fb,.....

What is a language?

Generally the languages like telugu / English / hindi / Marathi etc are called human languages. By using these human languages we are able to communicate with humans.

To communicate with the machines / computers we are writing / creating the programs [software]. By using these software we are making our work easy and faster.

C / C++ / java / .net / Python / Go / R etc are called computer programming languages because of they are used to develop the software to communicate with the computers.

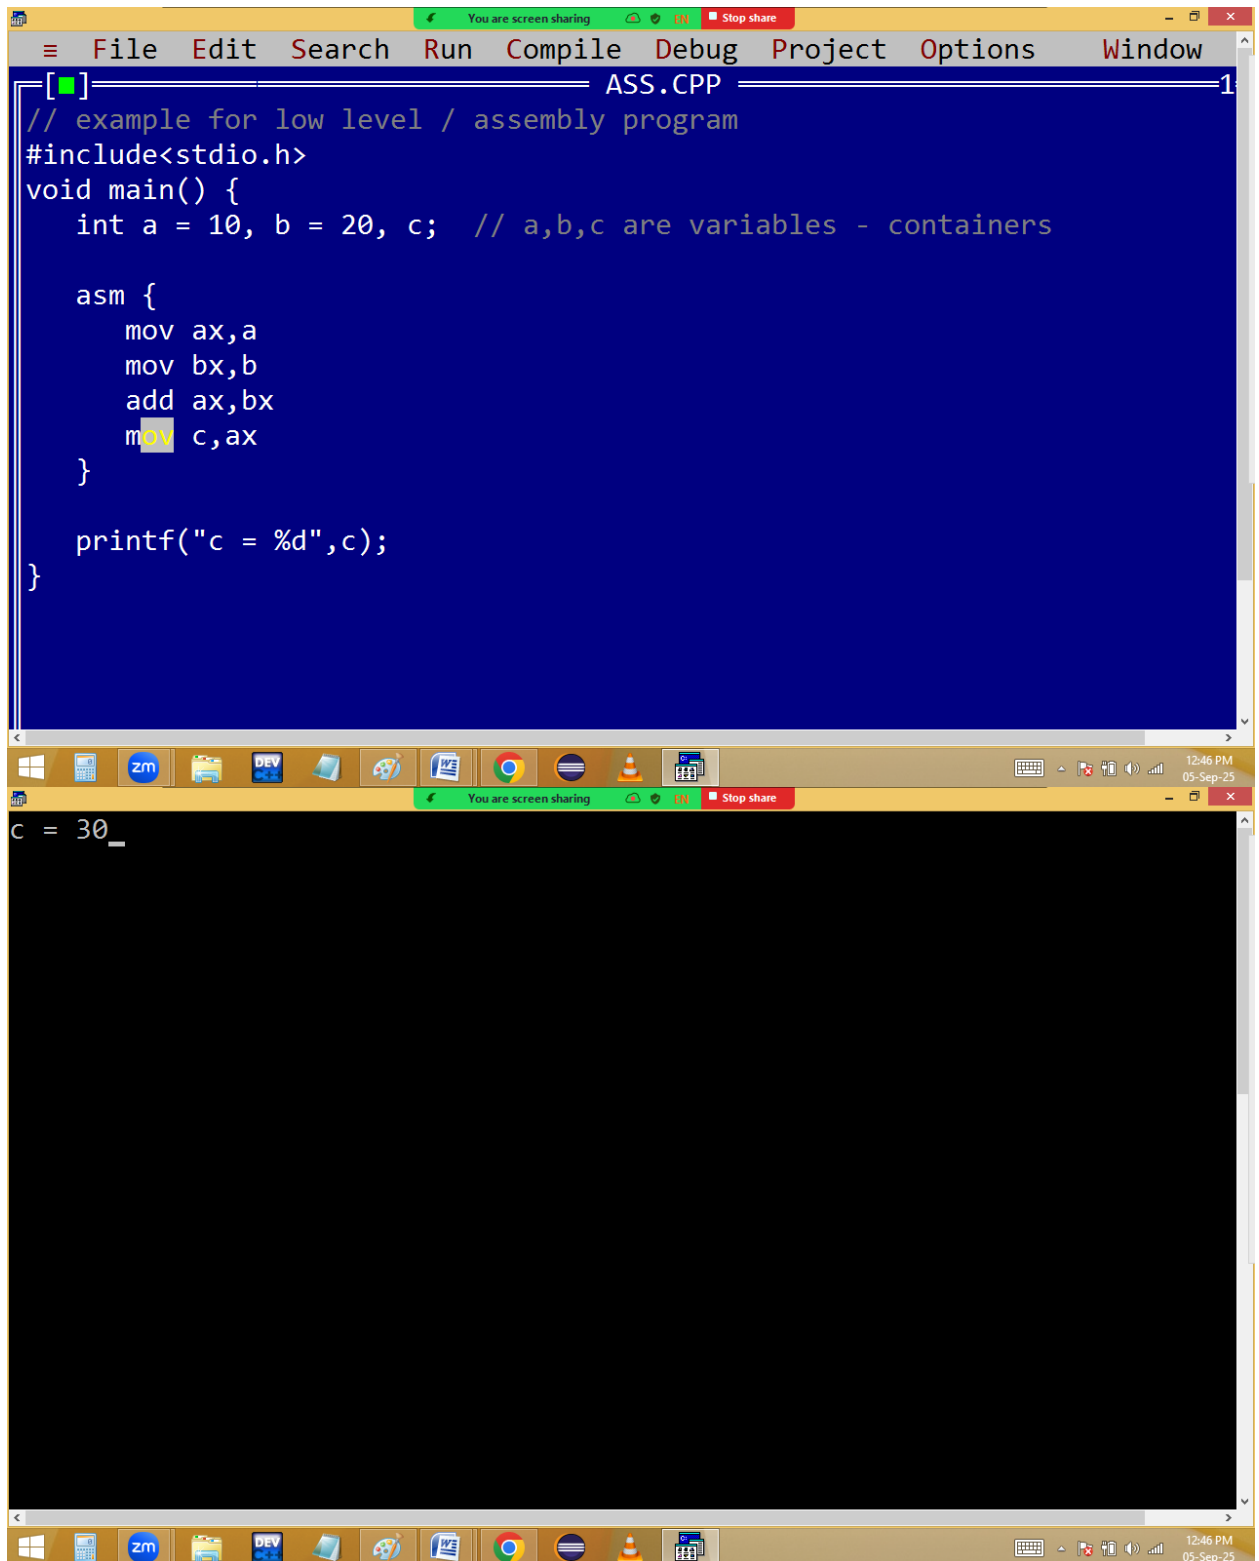

Basically these languages are divided into 3 types.

1. **Machine language**: Created with binary code and as human we can't understand.

Eg: 1001100

2. **Low level / assembly language**: Created with English like shortcuts called "**MNEMONICS**".

Eg: sub, add,...

```
File Edit Search Run Compile Debug Project Options Window
[ ] ASS.CPP 1
// example for low level / assembly program
#include<stdio.h>
void main() {
    int a = 10, b = 20, c; // a,b,c are variables - containers

    asm {
        mov ax,a
        mov bx,b
        add ax,bx
        mov c,ax
    }

    printf("c = %d",c);
}
```

c = 30_

3. High level language: Created with simple English and easy to understand.

Eg: Address, subject,...

The image shows a screenshot of a C++ IDE window titled "NONAME00.CPP". The code is as follows:

```
// example for high level language_  
#include<stdio.h> // header file  
void main()  
{  
int a=10, b=20,c=a+b;  
  
printf("c=%d",c);  
}
```

Below the code editor, the output window displays the result of the program execution: "c=30". The IDE interface includes a menu bar with options like File, Edit, Search, Run, Compile, Debug, Project, Options, and Window. The status bar at the bottom shows the time as 12:47 PM on 05-Sep-25.

C is having both low level and high level features.
Hence it is a middle level programming language.

C **low level features** are used to design **system software** and **high level features** for **applications software**. Hence c is a **multi-purpose** programming language.
